Detailed Action

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 22, 2007 has been entered.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show and label “the edge portions” and “track width direction” as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Response to Amendment

3. The reply filed on June 22, 2007 was applied to the following effect: Claims 3-5 and 8-10 have been amended, and Claims 1,2,6, and 7 are cancelled.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 3-5 and 8-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claims 3 and 8 recite the limitation "in each of edge portions". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2627

8. Claims 3-5 and 8-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Sato et al (US 6,697,221).
9. Regarding Claims 3 and 8, Sato et al shows (Figs. 1-3) a perpendicular magnetic recording head, comprising: a double layered perpendicular recording medium (Md) comprising a soft magnetic underlayer (Mb) and a perpendicular recording layer, which are formed on a substrate (Ma); and a perpendicular magnetic recording head comprising a main pole (24) configured to generate a recording magnetic field in a perpendicular direction, and an auxiliary pole (21) connected to the main pole on a leading side to the main pole (see Examiner's Drawing- connected through portion 25 – highlighted area), and a write shield (13+35+34) arranged apart from the main pole on a trailing side to the main pole and having a multilayered structure in which a nonmagnetic layer (34) is sandwiched between magnetic layers (35 and 24 – see Figure 2).
10. Regarding Claims 4 and 9, Sato et al shows (Figs. 1-3) the magnetic disc apparatus, wherein the write shield (13+35+34) has a shape such that a number of stacks of the magnetic layer (35) and the nonmagnetic layer (34) are larger in each of the edge portions than those in a central portion (thinner portion located above pole tip (24)) along the track width direction (see Examiner's Drawing).
11. Regarding Claims 5 and 10, Sato et al shows (Figs. 1-3) the magnetic disc apparatus, wherein the auxiliary pole (21,21a)) has a multilayered structure in which a nonmagnetic layer (26) is sandwiched between magnetic layers (Col 8, lines 21-25).

Response to Arguments

12. Applicant's arguments with respect to claims 3-5 and 8-10 have been considered but are moot in view of the new ground(s) of rejection.
